A well thought out web application can help make your company more productive, take care of many customer information requests, and allow your staff to focus on income earning projects.

Mobile App Development

Web Applications

Enterprise Support

We build Web Apps

Do you sell products? Do you have data that customers need access to such as shipping or job progress? Do you currently give that information out through e-mail or over the phone? A well thought out web app from CoreTechs can automate much of that work, leaving you and your employees free to be more productive and focus on projects that bring in revenue.

Content management

We have experience with many content management systems. If you need a system to manage website account registration, maintenance, RSS Feeds and more, we can design you a system that integrates flawlessly with your current web page—Or build you a whole new setup from the ground up. Some ideas:

- User Account Management
- RSS Feeds
- System administration
- Single or Multi-user blogs
- Internet Forums
- User generated content sites

Payment processing

Give your customers the option of paying online, any time of day or night. Free up employees for jobs other than collecting payments.

CoreTechs designs payment processing solutions that are:

- Safe and Secure
- PCI compliant
- Compliant with company privacy policies
- In keeping with the look and feel of existing websites
- Quick, intuitive, and user friendly

More and more companies are accepting payment through their websites, and if your company does a lot of transactions, a payment processing solution can save you lots of time. Many customers do not have the time to call in and pay invoices during business hours. Give them the option of paying when they want, and free up your staff to take care of other projects.
